# A Note on Right Locally Finite Simple Ring Extensions 

By Masayuki Ôhori<br>Department of Mathematics, Faculty of Science, Shinshu University<br>and Hisao Tominaga<br>Department of Mathematics, Faculty of Science, Okayama University<br>(Received May 9, 1977)

Throughout $A$ will represent an (Artinian) simple ring, $B$ a simple subring of $A$ containing 1 of $A$, and $V$ the centralizer of $B$ in $A$. A ring extension $A^{\prime} / B^{\prime}$ is said to be right locally finite if for any finite subset $F^{\prime}$ of $A^{\prime}$ the subring $B^{\prime}\left[F^{\prime}\right]$ is right finite over $B^{\prime}$. In [1], S . Takamatsu and the second author dealt with a right locally finite extension $A / B$ such that $V$ is simple and $A=B N$ with the normalizer $N$ of $B$ in $A$, and proved that $A / B V$ is right locally finite, which played an important role in the proof of [1, Theorem]. In this note, we shall prove the same without any restriction.

Theorem. If $A / B$ is right locally finite, then so is $A / B V$.
Proof. Let $F$ be an arbitrary finite subset of $A$, and choose an intermediate ring $B^{\prime}$ of $A / B[F]$ such that ${ }_{A} A_{B^{\prime}}$ is irreducible and the right rank $\left[B^{\prime}: B\right]_{R}$ is finite. Then by [2, Proposition 5.4 (b) $]$ the centralizer $V^{\prime}$ of $B^{\prime}$ in $A$ is a division ring and $m=\left[V: V^{\prime}\right]_{R} \leq\left[B^{\prime}: B\right]_{R}$. Let $\left\{v_{1}, v_{2}, \cdots, v_{m}\right\}$ be a right $V^{\prime}$-basis of $V$ and set $B^{\prime \prime}=B\left[F, v_{1}, \cdots, v_{m}\right]=\sum_{j=1}^{n} b^{\prime \prime} j B$. Since every element of $V^{\prime}$ commutes with all the elements of $B[F]$, we see that $B^{\prime \prime} V^{\prime} \supset V^{\prime} B^{\prime \prime}$, namely, $B^{\prime \prime} V^{\prime}$ is a subr. ing of $A$. Hence, $(B V)[F]=B^{\prime \prime} V^{\prime}=\sum_{j=1}^{n} b^{\prime \prime} j(B V)$, which proves the right local finiteness of $A / B V$.
